# JONES FAMILY ANGUS

ANNUAL BULL SALE & FEMALE SALE:  
MARCH 14, 2026 • 1 PM • FLINT HILLS STOCKYARDS

## WELCOME TO JONES FAMILY ANGUS,

Hello, and welcome to the seventh annual production sale at Jones Family Angus. It's hard to believe this is our seventh sale. What a time to be in the cattle business. We think owning Flint Hills Stockyards along with having a seedstock operation will align very well in the future. We are truly excited to be offering our deepest set of 18-month and yearling registered Angus bulls. There will be 4 Gelbvieh balancer bulls in the offering as well as 3 SimAngus Bulls. We are going to continue to run a 3 breed program. Along with 40 bulls we will be offering a nice set of commercial spring heifer pairs. These girls are ranch heifers and a balance of black and baldy heifers. Nice set.

The Angus bulls this year is an extremely strong set to look at. All of the bulls are out of AI sires or our JFA Battalion 316 herd sire. He sold for \$20,000 in our 2024 production sale. The bulls have been running on a 35 acre trap and getting fed silage, ddgs, and prairie hay along with a balancer supplement. We feel the ability to exercise is extremely important and allows these bulls to be athletic. Our fall bulls this year are extremely exciting. Between Iconic, Baldrige Grindstone, Iconic, Battalion, The Rock and Believer; these bulls can really cover cows and add growth. These bulls will add growth and carcass. We have a balance of Balancer and SimAngus bulls in the offering. These bulls are out of a lot of our good proven and young angus cows. These sons will help provide growth, fleshing ability, and fertility without sacrificing look.

The spring heifer pairs being offered are extremely nice. We bought 120 customer heifers out of JFA bulls or bred to JFA bulls. These heifers were asked to calve on their own in February 2025. We rarely assist these heifers unless the calf is backwards or has a leg back. We will sort down to 50 of the very best spring pairs to offer for sale.

Having the sale at Flint Hills Stockyards in St. Marys, KS has turned out to be very beneficial. We feel running the bulls through in a live format is a way to be unique in how we sell bulls. I want the customer to be able to evaluate and analyze the bulls attitude in the ring while he is being sold. We know a few bulls might get worked up during the sale, we can't forget these are bulls and anything is possible, but we want to be able to show the buyer the quality of bulls. Owning Flint Hills Stockyards makes for a great opportunity to market Jones Family Genetics at the sale barn for our customers.

Thank you for taking the time to look through the catalog and study the bulls. We would love to show the cattle to anyone interested. Please contact Spencer or Cassie to discuss how our operations could help yours.

## THANK YOU,

*Spencer, Cassie, Ty, Hayden, and Hadley Jones*

## **ABSENTEE BIDS**

Anybody wanting to bid, who cannot make the sale can place bids with Spencer Jones, Cassie Jones, or any representative of the sale staff. If you are unable to attend the sale, please watch it live on DV Auction to bid in real time.

## **ANNOUNCEMENTS**

Announcements made sale day and from the auction block will take precedence over printed materials.

## **TERMS OF SALE**

Cash or Check. All cattle are to be paid for during or immediately following the sale and will not be released until after settlement has been made. Each animal will be sold to the highest bidder; the auctioneer in charge will settle any disputes as to bids.

## **GUARANTEE – 4 Year breeding soundness guarantee!!!**

Bulls in the sale will have completed a breeding soundness exam prior to the sale. Bulls will be guaranteed for feet & legs and breeding soundness for 4 seasons at a prorated rate. For example: purchase a bull for \$5,000 and the salvage value is \$1,500. Take the initial price minus the salvage value and divide by 4. If a bull has an issue, it is imperative that the producer contact Spencer immediately to find a suitable replacement or offer credit on a future bull. Structure soundness issues will be examined by a veterinarian or Spencer himself. JFA will offer to house and feed the bulls free of charge until April 1, 2025. If a bull stays at JFA it is highly recommended for the animal to be insured by the buyer. Spencer will set up delivery at the buyer's convenience. Jones Family Angus will retain 1/3 semen interest in every bull in the sale.

## **FEMALES**

Cows will sell with calves at side or guaranteed pregnant by a licensed veterinarian. Calving information will be provided for bred animals. Pairs will sell as is the day of the sale. All female breeding information will be made transparent in the catalog.

## **DELIVERY**

Delivery of bulls will be free of charge in Kansas. If bulls are to remain at JFA, their delivery will be scheduled at buyer's convenience for April 1, 2026. Any bulls kept at JFA after this date will be charged \$5.00 per head per day for feed and yardage.

## **SALE DAY CREDITS**

There will be \$200 sale day credit per lot on animals purchased and picked up the day of the sale.

## **WEAN CALF BUY BACK PROGRAM**

Jones Family Angus would be willing to buy all non-weaned heifer calves out of JFA bulls at a premium. The premium would be \$5/cwt. Price will be determined by local markets. Ask Spencer about terms and premium amounts.

## **HERD HEALTH**

**Calves** - 2 months of age – Inforce Internasal, Ultrabac 8, Cydectin wormer

**Prewaning (2-3 weeks prior to weaning)** - All calves are given Pyramid 5 w/Presponse

**Weaning** – Calves are weighed, revaccinated with Pyramid 5, Ultrabac 7, poured Ivermectin

**Semen Check** - Bulls are semen checked, poured Ivermectin, and boosted with Pyramid 5

**Cows** Annually pre-breeding shots are given with Pregguard 10, and poured with Cydectin

**Pregnancy Check** - Cows are given a Ultrabac 8, and wormed with Ivermectin

# JONES FAMILY ANGUS ANNUAL BULL & FEMALE SALE

**MARCH 14, 2026 • 1 PM • FLINT HILLS STOCKYARD  
27425 DREW STREET, ST. MARYS, KS 66536**

### SALE DAY PHONES

Spencer Jones.....(620) 640-4593  
Cassie Jones.....(785) 477-3293

### SALE STAFF

Andrew Sylvester, Auctioneer.....(785) 456-4352  
Stephen Russell, KS Stockman.....(785) 893-1604  
Guy Peverley, The Stock Exchange.....(815) 419-7914  
Jeff Mafi, Angus Journal.....(816) 344-4266

### LOCATION

Flint Hills Stockyards, 27425 Drew Street, St. Marys, Kansas  
66536

### HIGHWAY 24

### LODGING

JFA headquarters is located directly between Manhattan (21 miles) and Topeka, KS (28 miles). Closer lodging in Wamego, KS is available at the Simmer Motel and Wamego Inn & Suites.

### SCHEDULE

Lunch will be served at 11:30 a.m. You are invited to come early to enjoy lunch and view the bulls. Auction will begin at 1 p.m.

### DV AUCTION

To view the bulls and bid online, visit [dvauction.com](http://dvauction.com)

# AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

**Expected Progeny Difference (EPD)**, is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

**Accuracy (ACC)**, is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

## PRODUCTION

**Calving Ease Direct (CED)**, expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Residual Average Daily Gain (RADG)**, feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

**Dry Matter Intake (DMI)**, expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the post-weaning phase, compared to that of other sires.

**Yearling Height (YH)**, expressed in inches, is a predictor of a sire's ability to transmit yearling height compared to that of other sires.

**Scrotal Circumference (SC)**, expressed in centimeters, is a predictor of the difference in transmitting scrotal size compared to that of other sires.

## MANAGEMENT

**Claw Set (Claw)**, expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes compared to another sire.

**Foot Angle (Angle)**, expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth compared to another sire.

**Docility (DOC)**, expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

**Pulmonary Arterial Pressure (PAP)**, expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

**Hair Shed (HS)**, expressed in units of hair shed score, with a lower EPD being more favorable. This indicates a sire should produce progeny who shed their winter coat earlier in the spring and has improved environmental adaptability in heat stressed areas and grazing endophyte-infected (hot) fescue.

## MATERNAL

**Heifer Pregnancy (HP)**, is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

**Calving Ease Maternal (CEM)**, expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Maternal Milk (Milk)**, expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability in his daughters. In other words, it is the part of the calf's weaning weight attributes to milk and mothering ability.

**Teat Size (Teat)**, expressed in units of teat size score, with a higher EPD indicating a sire will produce daughters with smaller teat size compared to that of other sires' daughters.

**Udder Suspension (UDDR)**, expressed in units of udder suspension score, with a higher EPD indicating a sire will produce daughters with tighter udder suspension compared to that of other sires' daughters.

**Functional Longevity (FL)**, expressed in number of calves, is a predictor of the number of calves a sire's daughters are predicted to produce by 6 years of age compared to that of other sires' daughters. A higher EPD is the more favorable direction indicating more calves produced on average.

**Mature Weight (MW)**, expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

**Mature Height (MH)**, expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

## CARCASS

**Carcass Weight (CW)**, expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Fat Thickness (Fat)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

## \$VALUE INDEXES

**\$Value Indexes**, expressed in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

**Maternal Weaned Calf Value (SM)**, expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with today's production.

**Weaned Calf Value (SW)**, expressed in dollars per head, provides the expected difference in future progeny pre-weaning performance from birth to weaning.

**Energy Value (\$EN)**, expressed in dollar savings per cow per year with a larger value being more favorable. It assesses differences in cow energy requirements, due to maternal milk and mature cow size.

**Feedlot Value (\$F)**, expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle through the feedlot phase and sell on a carcass-weight basis.

**Grid Value (\$G)**, expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

**Beef Value (\$B)**, expressed in dollars per carcass, represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

**Combined Value (\$C)**, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

## THANK YOU TO LUKE LAWLESS & HIS FAMILY

The Jones Family would like to extend our sincere appreciation to Luke and his family's dedication to our ranch.

From early mornings at the ranch to the many jobs that keep our operation moving every day, Luke has shown a level of commitment and dependability that we truly value. We are truly thankful for all you've done.
